## Exposure to fixed income sectors

Right: fund net exposure to fixed income sectors

## Correlation

Correlation is calculated between the fund's daily performances over last twelve months and those of subordinated bonds issued in Euro: Iboxx € Financial Subordinates TR Index.

Twelve months correlation may change significantly in comparison to the historical average since fund's inception. In a few circumstances, higher level of risk premium may persuade Fund manager to implement investment strategies with higher correlation to equity markets.

## Dynamics of Portfolio Volatility

Portfolio's volatility on a one year period is calculated multiplying standard deviation of daily performances by an annualization factor. Sample returns are relative to last twelve months and depends on the the volatility of markets where the fund is invested.

## Asset allocation

Right: dynamic of sharpe ratio over last twelve months.

Below: average portfolio's weight to each asset class

### Average asset allocation since inception

Financial Senior TR (IYG3X)	30,60%
Bank Subordinated (IYG9X)	25,48%
Insurance Subordinated (IBOXTUSM)	16,88%
Cash	7,41%
Financial Coco (IBXXC2DO)	13,38%
Government Bond (QW1A)	-6,96%

## Portfolio Evolution

## Correlation to Iboxx € Financial Subordinates TR Index

## Historical volatility

### Annualized Volatility, rolling 1 year

## Risk-return profile

### Sharpe ratio, rolling 1 year
