Risk profile

Investment policy

The fund aims to achieve absolute performance over the long term through a strategy primarily based on long and short exposure to European equities. Positions in equity instruments will be made either through the purchase of equity securities or through the use of CFDs (Contracts for Difference) on individual stocks or stock indices (sectoral and / or geographical). The fund may also use - for investment purposes, hedging risks and efficient portfolio management - listed derivative instruments such as futures and options.

The objective of the fund is to generate performance not closely correlated to European equity index. The volatility of the fund is expected in the medium term up to 10% on an annual basis.
